

ENGG1803 Professional Engineering 1 - PROJECT WORK

PEER EVALUATION OF GROUP MEMBERS

(To be submitted in an envelope to your tutor, or handed in with the Group Report, not later than Friday 30 October 2009)

You are invited to complete the form below and evaluate each member of the group in which you worked to complete this assignment.

This evaluation is confidential and your rating of other group members will not be disclosed to any of them.

You are to distribute a total of 100 times N percentage points, where N = the total number of group members including yourself. You may not award yourself any more than 100 points, but you may distribute the remaining points in any proportion that you wish to the other group members.

If every group member contributed equally to the project and work was shared in equitable proportions, then you would award everyone 100 points. If, however, group member "A" took on a leadership role and contributed more to the project than anyone else you might award "A" 120 points, and distribute the remaining points equally among the other group members. If group member "B" performed below the average for the group you might rate their performance at 90 or 95 points. If group member "C" did not come to any of your meetings, was uncooperative, and refused to do any of the work you might award "C" no points at all.
